

Document Management

Create a range of tools for all your document management needs.

Document management solutions provide tools to assist in the integration, archiving, organisation, management, and retrieval of knowledge contained in hardcopy and softcopy documents. These solutions include tracking and searching, collaborative document management functions, and they are used to consolidate information into manageable and efficient applications.

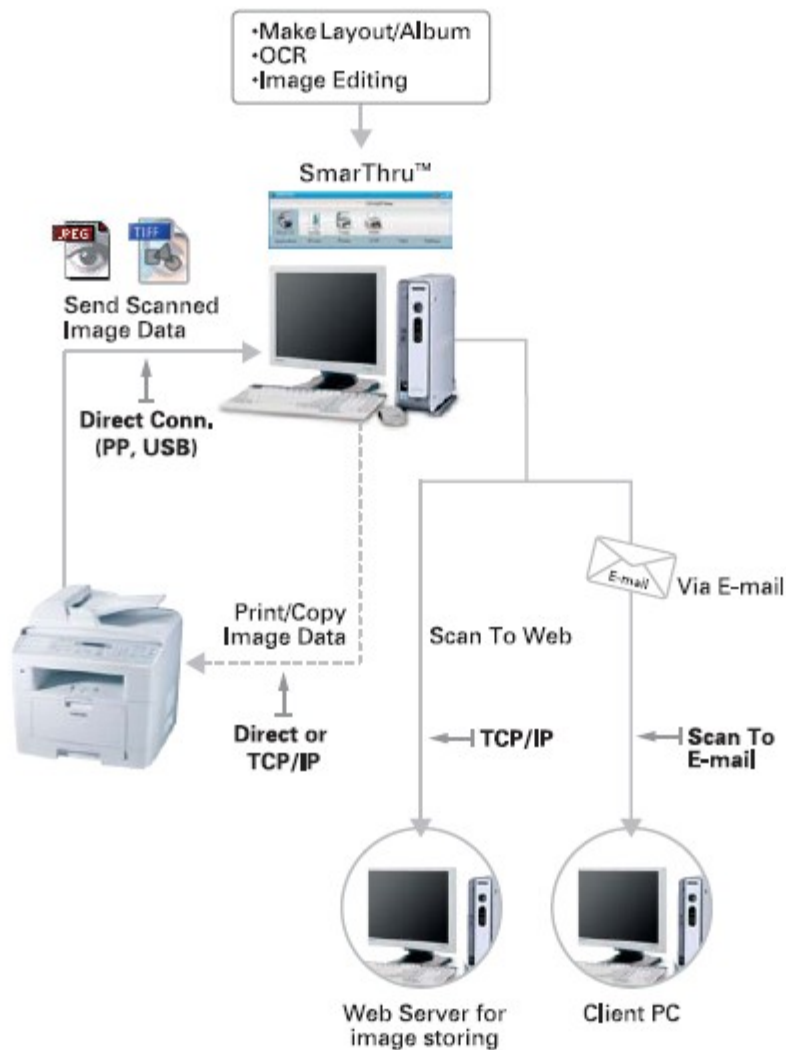

Samsung understands that even though the Document Management solutions do not directly relate to printing or scanning jobs, they occupy a large portion of document related operations in real business scenes, and thus sub-categorised the Document Management into two groups: Document Sharing and Document Manipulation.

SmarThru™

A powerful scanning and image distribution application to enhance your multifunction printer.

Work Flow Diagram

Document Management

Solution Description

SmarThru incorporates all your document production needs into a versatile Windows application. With powerful features, such as network colour scanning, image editing, OCR and network colour faxing, you will wonder how you ever managed your documents without it.

Convert your hard copy originals into digital documents for archiving or later retrieval. With the OCR (Optical Character Recognition) software, AnyPage, you can convert your documents into text for easy data retrieval and indexing.

Document distribution is made simple with scan wizards that guide users through the steps required to scan documents to multiple destinations via e-mail, web, and fax. Users will appreciate the convenience of scanning documents directly to their PC by using SmarThru client.

Benefits

- Compatible with all Samsung MFP products.
- License-free – unlimited network users.
- Multi-featured application: Network Scan / Fax / Copy / E-mail / OCR.
- Entry level Document Management Solution.
